CYC Adanac Trampoline – Risk Management Plan

School:	Year Level:	
Supervising teachers / staff:	Dates:	
Program / Excursion:	Location:	

For an explanation of risk management terminology and to ensure you understand how the rating / grading system is determined please ensure you have read the CYC Activity Risk Profile document.

The **Trampoline** Risk Management Plan contains the specific risks, control measures and grading's for this activity, as well as the grading's of all general risks relevant for all CYC activities. Please refer to the **General Activity Hazards – Risk Management Plan** for a list of general risks and control measures relevant for all CYC activities.

	Existing Control Measures		Risk Rating		
Risk Description			Consequence	Control Effectiveness	
Slip – Trip – Fall Causing injury to participant	 Entrance to trampoline by appropriate step or platform Safety side net must be installed and be in good repair 	Unlikely	Moderate	Satisfactory	
Participant and spectator behaviour Injury caused by the inability or decision not to follow directions	 There must be an adult supervisor present at the activity, even if it is being used as a free time activity Supervisor must be alert and concentrating at all times 		Moderate	Satisfactory	
Participant ability Injury caused by inability to conduct maneuvers	Participants are not to use the trampolines to learn new manoeuvres such as somersaults	Unlikely	Moderate	Satisfactory	
Striking / Collision • Only one person per trampoline at any given time Nith other participants • Those waiting for their turn must stay at a safe distance • Safety skirt must be installed and be in good repair to prevent people from going under trampoline		Unlikely	Moderate	Satisfactory	
Inappropriate use after hours Injury caused by unauthorised use of activities or equipment	 Trampolines need a mechanism for a locking the trampolines when not in use. This could be in the form of a fence and gate with a locking device or a lockable safety net entry system. Trampolines are only to be used in daylight hours only unless dedicated and appropriate lighting is installed 	Unlikely	Moderate	Satisfactory	
Structure Failure	 Trampolines are to be assembled and maintained according to the manufacturer's instructions Trampolines are engineered according to AS 4989 Do not use if excessive wear or damage is evident Regular equipment checks are completed and recorded by trained site staff Remove footwear, jewellery, glasses and any sharp objects from pockets 	Unlikely	Moderate	Satisfactory	

CYC Adanac RMP – Trampoline

Participants are not to intentionally bounce into or over the safety side net, as this can unbalance the trampoline and continual impact may damage the enclosure		

Risk Rating - Trampoline

All identified risks are recorded in the Risk Matrix according to the Likelihood and Consequence ratings. The purpose of this matrix is to provide a snapshot of all identified risks and establish the level of risk associated to determine if further treatment is required.

x		Likelihood					
	^	Almost Certain	Likely	Possible	Unlikely	Rare	
	Catastrophic	80	64	48	32	 Environmental Exposure 4 Environmental Hazard 3 	
	Major	40	32	24	 Environmental Hazard 1 Inappropriate use after hours People – Instructor 1 & 2 People – Group Leader 2 	8	
Consequence	Moderate	20	16	 Participant and spectator behaviour People – participant behaviour 	 Slip-Trip-Fall Participant ability Striking / Collision Inappropriate use after hours Structure Failure Environmental Exposure 2 	4 • Environmental Exposure 3	
	Minor	10	8	 Slip-Trip-Fall Environmental Exposure 1 Environmental Hazard 2 People – participant ability 	Entanglement Cutting / Scratching Striking People – Group Leader 1	2	
	Insignificant	5	4	3	2	1	

NB: All risks in **bold** are Trampoline specific risks. All other risks are from the General Activity Hazards RMP and are therefore relevant for all activities.

For grading risks, scores obtained from the risk matrix are assigned grades as follows;

HIGH	MEDIUM	LOW
20 – 80	10 – 16	1 – 8
Unacceptable risk which requires immediate action to reduce or remove the hazard. Senior management must be notified. Item should be TAKEN OFF LINE until risk reduced.	Conditionally acceptable, requires short term controls and continuous monitoring.	Acceptable risk, however monitoring required ensuring risk does not escalate. Review in 12 months or if situation changes.
